

Tenora PMS - MVP Scope

Objective

Rather than building the full Property Management System immediately, we will be starting with a focused MVP that solves the two most important operational needs:

- Tenancy/Rent Reminders
- Service Charge Management

This allows us to launch a working system quickly, begin using it immediately, and expand based on feedback and future requirements.

Initial Deployment

The system will be hosted under:

pms.dikewonsi.cloud

This will allow immediate access and testing while keeping future migration options open.

MVP Features

Property Management

- Add and manage properties
- Property details and unit information

Tenant Management

- Add and manage tenants
- Assign tenants to properties/units

- Store contact information

Tenancy & Rent Reminders

- Rent amount
- Start date
- Due date
- Payment frequency
- Payment status

Dashboard alerts for:

- Rent due soon
- Rent due today
- Overdue rent

Service Charge Management

- Create service charge records
- Track payments
- View paid/unpaid balances
- Categorize charges (security, cleaning, electricity, maintenance, etc.)

Dashboard

Overview of:

- Total properties
 - Total tenants
 - Rent due
 - Overdue rent
 - Outstanding service charges
-

Future Phases

Once the MVP is live and being used, additional modules can be added:

- Complaint Management
 - Property Inspections
 - WhatsApp/SMS/Email Notifications
 - Landlord Portal
 - Valuation Tools
 - Advanced Reporting
 - Mobile Application
-

End Goal

Launch a working Property Management System focused on rent reminders and service charge tracking in (2) two weeks, then expand into a complete property and facility management platform as requirements evolve.
